Ed, I have looked over the draft plan and have the following comments:

1. USTRD can only comment on the soil and groundwater portions of the plan. Vegetation, surface water, building material/waste, or air sampling are not covered by our division.
2. RECAP may be used only for soil and groundwater, other media standards must be determined by the appropriate regulatory division.
3. Sample locations should be checked for utilities by calling 811.
4. If groundwater is to be sampled, a plan for installing the borings/wells should be submitted and include development and plugging and abandonment procedures. The paragraph included is not detailed enough to evaluate.
5. Soil sampling appears to be appropriate. Fractionation is appropriate when THP-D,O exceeds RECAP standards. Be certain the samples are of native soil not sludges or sediment from flooding, RECAP does not apply to those media. Shallow soil borings may be plugged with cuttings if no water bearing zone is encountered, grouting is preferred.

Please contact me if you have additional questions.

Gary,

Can you get the Remediation folks to review and comment on this Sampling plan? Please give me an idea of time required.

Thanks!
